

TIPS FOR WIPER SHAKER USAGE

1. As the SHAKER is not a windshield de-icer, drivers must start their journey with a clean windshield, therefore:
2. As the SHAKER acts as a wiper anti-icer while driving (i.e., it is not meant to break ice off a frozen up blade after a storm), it is crucial to start the journey with a wiper in good condition and free of ice build up so that it is flexible and able to squeegee the windshield properly.
3. While on a plow run, activate the SHAKER for anywhere from a few seconds to 10 seconds (such as in freezing rain conditions) at the very first sign of any imminent wiper related problems.

Drive safely.
